Release Notes

These notes refer to the latest changes in the system sorted by release date. You can find these under Help menu.

ACCOUNTING

Maintenance

Transaction Types

- **Reverse charge self - assessment.** In some cases, with some purchases from abroad a reverse charge transaction must be created, but the company is charged with vat output an amount due to be paid to the state. Note on the figures below, the reverse charge input transaction has G=0% vat and the reverse charge input account is not debited, and the reverse charge output transaction has G=19% vat and extra lines are created that debit the expense and credit the reverse charge vat output with the vat amount.
As shown on the third figure, the reverse charge vat input is "missing" from the VAT report, thus creating an amount due to be paid.
